What to Plant and When to Plant It

(APPLIED TO THE PECOS VALLEY OF NEW MEXICO)

JANUARY—After making out a list of all seeds you wish to plant, mail it to the Roswell Seed Co., with full shipping directions. Of course, you want the best at reasonable prices and we will be glad to furnish it to you.

Prepare plant beds for early cauliflower, cabbage, egg plant, lettuce, onions, pepper and tomatoes.

FEBRUARY—Your hot beds should be planted this month. Plant onion seeds and sets, carrots, extra early peas, parsnips, pie plant, asparagus and horse radish early in the month. Early potatoes about the 15th.

MARCH—Plant oats, corn, peas, both early and second early. Bed out sweet potatoes in hotbeds. Plant early tomatoes in hotbeds early this month also pepper and egg plant. Plant onions, lettuce, radishes, mustard, leek, parsley, spinach, parsnips, salsify and stock beets.

APRIL—Plant celery, turnips, okra, peas, corn, lettuce, radishes, so as to have a succession. Plant early squash, early and second early beans and tomato and sweet potato plants about the 10th or 15th. Begin planting cotton April 10th.

MAY—Melons, cucumbers, lima beans and pole beans, pumpkin, squash, black-eyed peas and okra should be planted. Plant cowpeas and peanuts. Set out tomato and sweet potato plants. Plant more beans, peas, lettuce, radishes, mustard and corn. Sow seed of late cabbage in beds. Finish planting cotton last of the month.

JUNE—Finish putting out plants for regular summer and fall crops. Plant late cabbage seed in hills in the field. Melons, cucumbers, squash and pumpkin should be planted now, also milo, corn, cowpeas millet, cane and kaffir. Plant Mexican beans.

JULY—Plant pole and corn field beans. Make your last planting of corn, kaffir, cane, milo. Set out celery and cabbage plants. Sow turnips and rutabaga for fall and winter use. Plant cucumbers for pickling.

AUGUST—Plant beans for fall use and a few cucumbers for pickling. Finish planting celery early in the month. Sow more turnips. Plant early cabbage for fall and winter use. Plant cucumbers for pickling.

SEPTEMBER—Prepare for late fall and early winter by planting beets, corn salad, kale, lettuce, mustard, and spinach. Sow onion seed for winter and spring transplanting.

OCTOBER—Finish up the planting of last month and add mustard, lettuce and spinach for early spring. Plant winter radishes and onion sets.

NOVEMBER—Finish harvesting your crops and prepare for winter.

DECEMBER—Foot up the profits and send to us for next season's catalog.

PRE-TESTED INOCULATOR

This is a bacteria that is strong and vigorous and capable of producing root nodules that will draw nitrogen from the air. This product is prepared in three cultures: One for alfalfa and clovers, another for garden peas and beans, and another for Soy Beans, Cow Peas, peanuts and field peas and beans. There is much to be said in favor of Pre-tested Inoculator for your seed. Produce a better plant, increase your production and improve your soil.

Cotton and Corn Seed

Grown by Fred M. Nelson of Roswell and certified by the New Mexico Crop Improvement Association

THE 37A (1064) COTTON has the two characteristics that are most desired. It is the earliest and produces the longest staple of any cotton that has been grown in the Pecos Valley.

First indication of earliness is shown by the stronger seedling vigor. Records from test plots in the Pecos Valley show the first picking to yield about 50% more than other strains. This first picking turned out to be 85% of the crop. On this same test plot the 1064 produced a most uniform lint of extra good strength that measured 1 5/32 inches. The yield was better than three bales per acre. The seed we offer is Blue Tag Certified. 100 lbs. in the lint \$3.50; 100 lbs. delinted \$7.50.

COLLEGE ACALA COTTON is preferred by many for upland ground where it does not produce excessive rank growth. It has met with great success in Southeastern New Mexico and parts of West Texas. It is a large balled, high yielding cotton with a good staple of about 1 3/32 inches. We offer Blue Tag Certified Seed. 100 lbs. in lint \$3.50; 100 lbs. delinted \$7.50.

IMPROVED MEXICAN JUNE CORN has proved to be the most dependable corn crop for the Pecos Valley. It is acclimated here; it will make a crop when others fail. It will make with less water. The shucks cover the end of the ear and protect the corn from worms. We seldom find this corn affected by smut. The tall stalks make it especially desirable for ensilage. Year in and year out you cannot go wrong in Nelson's Certified Mexican June Corn. 100 lbs. \$5.00.

ALL OF ABOVE PRICES ARE F. O. B. ROSWELL

We carry a complete stock of field seeds and will issue a Field Seed Price List in February.

PEAT MOSS

Peat Moss serves three purposes in your plant beds: supplies humus to the soil, produces essential acids to break down complicated food substances so that plants may use the foods in the simplest and most nourishing forms and it supplies the mulch to hold moisture and protect plants.

Ordinary soil is likely to dry, cake or harden. Humus makes it loose and springy. Humus absorbs moisture; sucks in the warm, life-giving rays of the sun; stores up plant food and releases it to the hungry roots when they need it most.

Peat Moss is pure vegetable matter which Nature only can produce. We offer the choicest which comes from the huge primeval bogs of Sweden and the Northland countries of Europe. Price \$3.85 for bales that weigh about 140 lbs. Prices on larger and smaller amounts given on request.
